COOLING TOWER DEPOSE of AI Cooling Towers www.coolingtowerdepost.com

Clay tile spacer ring for tile fill towers. Our clay fill is designed as a direct replacement for the more common existing tile fill towers. Molded and kiln fired to our specifications, Our CTD clay fill is durable and designed to last longer than any other fill we offer. The larger flute size of the clay fill

is ideal for extremely poor water quality and the design is perfect for towers located in ever changing weather. Due to the strength of this design, clay fill is also able to withstand the standard deterioration that you will find in most cellular fill packs.

With our clay fill design, you can expect a long lasting and strong fill without the need for regular replacement and an optimal thermal performance.
